## Anti Vibration Pad(long type)

JT.1053.C.00

## Product Information

### General characteristics

#### General Definition

Anti Vibration Pad is use for mechanical parts, play the role of shock absorption, padding, sealing, cushioning, etc.In some cases, slow down the same frequency vibration when the engine is running, making the tool easier to grasp and use.

#### Working Principle

The coiled long-chain molecular structure in rubber and the weak secondary force between the molecules make the rubber material exhibit unique viscoelastic properties, so it has good shock absorption, sound insulation and cushioning properties.

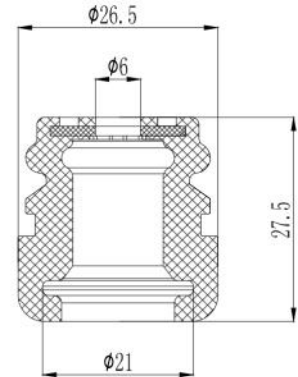

#### Description of Use

Oil resistance, long life, aging resistance, corrosion resistance, strong cushioning, UV resistance, can meet REACH, and other environmental requirements

### Design and Assembly

#### Feature

JT1053 series shock absorbing pad composed of gasket and rubber

#### Mounting Instructions

This product is fixed with screws, which is safe and solide ,please contact Us for Mounting instructions

### Available Product Numbers

Part Number  
JT.1053.C.00

Material  
NBR
